The Clinician's AI Safety Check

Field Guide 01, CI/FG/001
Version 2.0, November 2026

Before you open the tool, ask three questions. If an answer needs action, do it before you go on.

1. Tool and task

Is this specific AI tool, account and intended use permitted by my organisation?

No: **STOP**. Not sure: **ASK FIRST**

2. Information

Am I only using information permitted for this tool and workflow?

No: **CHANGE APPROACH** or **STOP**.
Not sure: **ASK FIRST**

3. Identifiability

Could these details, alone or together, identify a person?

Yes or not sure: **pause** and follow local guidance

No issue from these three? **Continue only** if your organisation permits this tool, use and information, and verify outputs before relying on them. This card never means "passed".

Before

1. Is this exact tool, account and environment approved for my intended task?
2. What am I entering, and is every data type and detail permitted and necessary?
3. Is the purpose appropriate and authorised, and could details identify someone alone or together?

During

4. Am I staying within permitted information boundaries, including attachments, screenshots and follow-up prompts?
5. Am I keeping AI within its authorised supporting role and retaining human clinical judgement?
6. If the task changes, AI asks for more data or a concern arises, should I stop and seek advice?

After

7. Did AI invent, omit, distort or overstate anything clinically important compared with the source?
8. Have I checked relevant facts, figures, medications, links, evidence and references against suitable sources?
9. Has the output followed the right review route (one patient, or reused and shared), and storage and versioning rules?

AI confidence is not evidence.

If something goes wrong

1 STOP
Stop further disclosure, sharing or reliance.

2 REPORT
Use your organisation's approved incident channel, promptly.

3 RECORD
Facts, time, tool and account, possible exposure. Approved systems only.

4 CONTAIN
Follow instructions on access, retention, deletion and evidence. Deleting the chat doesn't undo it.

5 COOPERATE
Follow the response and any patient-safety actions.

Local policy always comes first. This card doesn't approve any tool or use.
